

Success Story

Reference installation of 2N® Helios IP

Name of the customer/project

Apartments in Potts Point Sydney,
Australia with Harbour Bridge Views

Industry/field of the customer

Large residential solution

Project Requirements

Grantham Street is Potts Points newest Luxury Apartment Complex. The state of the art building features Switch Automation's IP home automation throughout. This system controls everything from security with bio locks to lighting to climate control. They needed Video Communication from the driveway to each apartment which is compatible with the Switch Automations LCD SIP Panel to receive calls.

Solution

Solution was based on an Asterisk SIP Server. Helios IP 1 Button + Camera + Keypad + Extender Panel completed the solution to make direct video calls to each apartment. The driveway was equipped with a 2N Helios IP stainless steel door station, providing keypad access to residents through a pin code and voice prompt originating from the building server. The pin code is unique per resident and triggers a series of events tailored to their needs, including the vehicle entry sequence, and calling the lift. The resident or visitor also has the ability to call the concierge from the driveway, and other door stations on the property. This was the best solution to support IP System throughout the complex.
