

Success Story

Reference installation of 2N® Helios IP

Name of the customer/project

Southern Cross Aged Care Facility NSW

Industry/field of the customer

Hospital / pharmacy

Project Requirements

The customer wanted a stand alone VoIP Intercom system on an independent network to service 5 Nurse call stations inside the hospital wing of the Aged Care Facility. There were 3 entrances, main, staff and kitchen all required to have an intercom for calling any 1 of the 5 nurse call stations with Audio and Video communications and the ability for staff to use the keypad for keyless entry.

Solution

We designed an independent VoIP system using the 3 X Helios IP 6 Button with keypads units for all the entrances, 5 X Grandstream Multimedia Phones and a WARP PBX running asterisk. The system is connected to the internet for remote upgrades of firmware for Helios IP.
